RIP

Union Health Ministry reports 143 deaths due to heatstroke as of July 2024

Prolonged Heatwaves, A Human Tragedy

The sweltering heat of an Indian summer is more than just high temperatures. It has far-reaching consequences on the economy, ecology, and human well-being. Some of these are listed below:

Economic Impact

- Reduced crop yields
- Loss in agriculture revenues
- Increased demand for cooling
- Increased energy consumption

Ecological Impact

- Water shortages
- Accelerate glacial melt
- Sea-level rise
- Biodiversity losses

Human Impacts

- Loss of productivity
- Increased cases of heatstroke, heat stress, & severe dehydration
- Increased likelihood of premature births
